New Publications
Mathematics

Dear reader,

Springer Nature is proud to offer you a rich selection of new book publications and bestselling backlist titles in Mathematics. It highlights the new titles most likely to interest specialists working in the professional field or in academia. You will find the international authorship and high quality contributions you have come to expect from the Springer Nature brand in every title. Please show this catalog to your buyers and acquisition staff. It is a premier and most authoritative source of new print book titles from Springer Nature. We offer you a wide range of publication types – from contributed volumes focusing on current trends, to handbooks for in-depth research, to textbooks for graduate students. If you are looking for something very specific, go to our online catalog at springer.com and search among the 286,563 books in print by keyword. The Advanced Search makes it easy to define any scientific subject you have. You can even download a catalog just like this one with your own personal selection – completely free of charge!

We hope you will enjoy browsing through our new titles and make your selection today!

With best wishes,
Ria Frauenfeld
Marketing Coordinator

<tr>
<td>Basic Algebraic Topology and its Applications</td>
<td>M. R. Adhikari</td>
<td>This book provides an accessible introduction to algebraic topology, a field at the intersection of topology, geometry and algebra, together with its applications. Moreover, it covers several related topics that are in fact important in the overall scheme of algebraic topology.</td>
<td>$109.99</td>
<td>978-81-322-2841-7</td>
</tr>
<tr>
<td>Homological Methods, Representation Theory, and Cluster Algebras</td>
<td>I. Assem, S. Trepode</td>
<td>This text presents six mini-courses, all devoted to interactions between representation theory of algebras, homological algebra, and the new ever-expanding theory of cluster algebras. The interplay between the topics discussed in this text will continue to grow and this collection of courses stands as a partial testimony to this new development.</td>
<td>$69.99</td>
<td>978-3-319-74584-8</td>
</tr>
<tr>
<td>Numerical Semigroups and Applications</td>
<td>A. Assi, P. A. García-Sánchez</td>
<td>This work presents applications of numerical semigroups in Algebraic Geometry, Number Theory, and Coding Theory. Background on numerical semigroups is presented in the first two chapters, which introduce basic notation and fundamental concepts and irreducible numerical semigroups.</td>
<td>$109.99</td>
<td>978-3-319-41329-7</td>
</tr>
<tr>
<td>Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory</td>
<td>G. Böckle, W. Decker, G. Malle</td>
<td>This book presents state-of-the-art research and survey articles that highlight work done within the Priority Program SPP 1489 “Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory”, which was established and generously supported by the German Research Foundation (DFG) from 2010 to 2016. The goal of the program was to substantially advance algorithmic and experimental method.</td>
<td>$169.99</td>
<td>978-3-319-70565-1</td>
</tr>
<tr>
<td>Numerical Linear Algebra</td>
<td>F. Bornemann</td>
<td>This book offers an introduction to the algorithmic-numerical thinking using basic problems of linear algebra. By focusing on linear algebra, it ensures a stronger thematic coherence than is otherwise found in introductory lectures on numerics.</td>
<td>$49.99</td>
<td>978-3-319-74221-2</td>
</tr>
<tr>
<td>Galois Theory Through Exercises</td>
<td>J. Brzeziński</td>
<td>This textbook offers a unique introduction to classical Galois theory through many concrete examples and exercises of varying difficulty (including computer-assisted exercises).</td>
<td>$49.99</td>
<td>978-3-319-72325-9</td>
</tr>

Building Bridges Between Algebra and Topology

This volume presents an elaborated version of lecture notes for two advanced courses: (Re)Emerging methods in Commutative Algebra and Representation Theory and Building Bridges Between Algebra and Topology, held at the CRM in the spring of 2015. Homological algebra is a rich and ubiquitous area; it is both an active field of research and a widespread toolbox. [...] 2018. X, 225 p. (Advanced Courses in Mathematics - CRM Barcelona) Softcover

Due March 2018

F. Chazal, V. de Silva, M. Glisse, S. Oudot

The Structure and Stability of Persistence Modules

This book is a comprehensive treatment of the theory of persistence modules over the real line. It presents a set of mathematical tools to analyse the structure and to establish the stability of such modules, providing a sound mathematical framework for the study of persistence diagrams. [...] 2016. X, 120 p. 17 illus., 15 illus. in color. (SpringerBriefs in Mathematics) Softcover

R. Lal

Algebra 2

Linear Algebra, Galois Theory, Representation theory, Group extensions and Schur Multiplier

This is the second in a series of three volumes dealing with important topics in algebra. Volume 2 is an introduction to linear algebra (including linear algebra over rings), Galois theory, representation theory, and the theory of group extensions. [...] 2017. XVIII, 432 p. (Infosys Science Foundation Series) Hardcover

$ 89.99

Available
L. Ribes
Profinite Graphs and Groups
This book offers a detailed introduction to graph theoretic methods in profinite groups and applications to abstract groups. It is the first to provide a comprehensive treatment of the subject. [...] 2017. XV, 471 p. (Ergebnisse der Mathematik und ihrer Grenzgebiete. 3. Folge / A Series of Modern Surveys in Mathematics, Volume 66) Hardcover $139.99 ISBN 978-3-319-61041-2

P. Ribenboim
Collected Works in Ordered Structures and Mathematical Logic
Volume 1
This two-volume collection contains Paulo Ribenboim's work on ordered structures and mathematical logic. Two long unpublished papers and a reproduction of his first book on abelian groups are also featured in these volumes. [...] 2018. Approx. 580 p. Cloth bound approx. $189.00 ISBN 978-3-319-72140-8

Volume 2
This two-volume collection contains Paulo Ribenboim's work on ordered structures and mathematical logic. Two long unpublished papers and a reproduction of his first book on abelian groups are also featured in these volumes. [...] 2018. Approx. 630 p. Cloth bound approx. $189.00 ISBN 978-3-319-72143-9

S. R. Mukkamala
A Course in BE-algebras
This book presents a unified course in BE-algebras with a comprehensive introduction, general theoretical basis and several examples. It introduces the general theoretical basis of BE-algebras, adopting a credible style to offer students a conceptual understanding of the subject. [...] 2018. XV, 448 p. 3 Illus. M. R. Ebert, M. Reissig

**Methods for Partial Differential Equations**

Qualitative Properties of Solutions, Phase Space Analysis, Semilinear Models  
This book provides an overview of different topics related to the theory of partial differential equations. Selected exercises are included at the end of each chapter to prepare readers for the “research project for beginners” proposed at the end of the book. It is a valuable resource for advanced graduates and undergraduate students who are interested in specializing in this area. [...]

Heuristics are strategies using readily accessible, loosely applicable information to control problem solving. Algorithms, for example, are a type of heuristic. By contrast, Metaheuristics are methods used to design Heuristics and may coordinate the usage of several Heuristics toward the formulation of a single method. [...]
Feferman on Foundations
Logic, Mathematics, Philosophy
This volume honours the life and work of Solomon Feferman, one of the most prominent mathematical logicians of the latter half of the 20th century. In the collection of essays presented here, researchers examine Feferman's work on mathematical as well as specific methodological and philosophical issues that tie into mathematics.

Riemannian Geometry
Intended for a one year course, this text serves as a single source, introducing readers to the important techniques and theorems, while also containing enough background on advanced topics to appeal to those students wishing to specialize in Riemannian geometry.

3rd ed. 2016. XVIII, 499 p. 50 illus., 1 illus. in color. (Graduate Texts in Mathematics, Volume 171) Hardcover
$79.99
ISBN 978-3-319-26652-7

Riemannian Geometry

Analytic Aspects of Convexity
This book presents the proceedings of the international conference Analytic Aspects of Convexity, which was held in Rome in October 2016. It offers a collection of selected articles, written by some of the world’s leading experts in the field of Convex Geometry, on recent developments in this area: theory of valuations; geometric inequalities; affine geometry; and curvature measures.

2018. IX, 120 p. (Springer INdAM Series, Volume 25) Hardcover
$89.99
ISBN 978-3-319-71833-0

Geometry Through History
Euclidean, Hyperbolic, and Projective Geometries
Presented as an engaging discourse, this textbook invites readers to delve into the historical origins and uses of geometry. The narrative traces the influence of Euclid’s system of geometry, as developed in his classic text The Elements, through the Arabic period, the modern era in the West, and up to twentieth century mathematics.

2018. XII, 351 p. 233 illus. in color. Hardcover
$59.99

A Course on Basic Model Theory

This self-contained book is an exposition of the fundamental ideas of model theory. It presents the necessary background from logic, set theory and other topics of mathematics. Only some degree of mathematical maturity and willingness to assimilate ideas from diverse areas are required. The book can be used for both teaching and self-study, ideally over two semesters. [...] 
2017. XIX, 291 p. Hardcover 
$ 84.99 
ISBN 978-981-10-5097-8

Topological and Condensed Matter Physics

This book introduces aspects of topology and applications to problems in condensed matter physics. Basic topics in mathematics have been introduced in a form accessible to physicists, and the use of topology in quantum, statistical and solid state physics has been developed with an emphasis on pedagogy. [...] 
2017. XXVIII, 507 p. 148 illus., 80 illus. in color. (Texts and Readings in Physical Sciences, Volume 19) Hardcover 
$ 169.99 

Mathematical Physics: Classical Mechanics

As a limit theory of quantum mechanics, classical dynamics comprises a large variety of phenomena, from computable (integrable) to chaotic (mixing) behavior. This book presents the KAM (Kolmogorov-Arnold-Moser) theory and asymptotic completeness in classical scattering. [...]

$ 89.99 
ISBN 978-3-662-55772-3

Stochastic Analysis for Finance with Simulations

This book is an introduction to stochastic analysis and quantitative finance; it includes both theoretical and computational methods. Topics covered are stochastic calculus, option pricing, optimal portfolio investment, and interest rate models. Also included are simulations of stochastic phenomena, numerical solutions of the Black–Scholes–Merton equation, Monte Carlo methods, and time series. [...] 
2016. XXII, 657 p. 189 illus., 107 illus. in color. (Universitext) Softcover

ISBN 978-3-319-25587-3

Modeling Life

The Mathematics of Biological Systems

This book develops the mathematical tools essential for students in the life sciences to describe interacting systems and predict their behavior. From predator-prey populations in an ecosystem, to hormone regulation within the body, the natural world abounds in dynamical systems that affect us profoundly. [...]

Periods and Nori Motives

J. Barnes
Nice Numbers
In this intriguing book, John Barnes takes us on a journey through aspects of numbers much as he took us on a geometrical journey in Gems of Geometry. [...] 2016. XIII, 329 p. 152 illus., 39 illus. in color. Hardcover $49.99 ISBN 978-3-319-46830-3
R. U. Verma
Semi-Infinite Fractional Programming
This book presents a smooth and unified transitional framework from generalised fractional programming, with a finite number of variables and a finite number of constraints, to semi-infinite fractional programming, where a number of variables are finite but with infinite constraints. [...] 2017. XI, 291 p. (Infosys Science Foundation Series) Hardcover $139.99 ISBN 978-981-10-6255-1 Available

N. Ploskas, N. Samaras
Linear Programming Using MATLAB®
This book offers a theoretical and computational presentation of a variety of linear programming algorithms and methods with an emphasis on the revised simplex method and its components. A theoretical background and mathematical formulation is included for each algorithm as well as comprehensive numerical examples and corresponding MATLAB® code. [...] 2017. XVII, 637 p. 59 illus., 47 illus. in color. (Springer Optimization and Its Applications, Volume 130) Hardcover $159.99 ISBN 978-3-319-64842-2 Available

Optimization and Approximation
This book provides a basic, initial resource, introducing science and engineering students to the field of optimization. It covers three main areas: mathematical programming, calculus of variations and optimal control, highlighting the ideas and concepts and offering insights into the importance of optimality conditions in each area. [...] 2017. XIII, 254 p. 56 illus. (UNITEXT, Volume 108) Softcover $74.99 ISBN 978-3-319-64842-2 Available

A. D. Ioffe
Variational Analysis of Regular Mappings
Theory and Applications
This monograph offers the first systematic account of (metric) regularity theory in variational analysis. It presents new developments alongside classical results and demonstrates the power of the theory through applications to various problems in analysis and optimization theory. [...] 2017.
