**Light Pollution Responses and Remedies**

There have been many developments in the field of light pollution over the last few years, and this second edition of ‘Light Pollution - Responses and Remedies’ will introduce them in detail. [...] 

2nd ed. 2012. XXII, 282 p. 165 illus., 42 illus. in color. (The Patrick Moore Practical Astronomy Series) Softcover 

$39.99  

---

B. D. Warner

**A Practical Guide to Lightcurve Photometry and Analysis**

For those with access to even a modest telescope and CCD camera, this new and improved guide delivers all the information needed to take part in the scientific study of asteroids and variable stars. New techniques in photometry continue to be refined, and expert Brian Warner covers the developing territory in detail for those both new and experienced. [...] 

2nd ed. 2016. XXII, 410 p. 202 illus., 52 illus. in color. (The Patrick Moore Practical Astronomy Series) Softcover 

$49.99  
ISBN 978-3-319-32749-5

E. Rix, K. Hay, S. Russell, R. Handy

**Solar Sketching**

A Comprehensive Guide to Drawing the Sun

From the authors of Sketching the Moon comes a comprehensive guide filled with richly illustrated, detailed drawing tutorials that cover a variety of solar phenomena. [...] 

2015. XIX, 424 p. 439 illus., 125 illus. in color. (The Patrick Moore Practical Astronomy Series, Volume 178) Softcover 

$49.99  

---

G. R. Hubbell

**Scientific Astrophotography**

How Amateurs Can Generate and Use Professional Imaging Data

Scientific Astrophotography is intended for those amateur astronomers who are looking for new challenges, once they have mastered visual observing and the basic imaging of various astronomical objects. It will also be a useful reference for scientifically inclined observers who want to learn the fundamentals of astrophotography [...] 

2013. XXX, 333 p. 97 illus., 46 illus. in color. (The Patrick Moore Practical Astronomy Series) Softcover 

$49.99  

---

G. Privrett, K. Jones

**The Constellation Observing Atlas**

Designed for anyone who wishes to learn the constellations or observe the best and brightest deep sky objects and double stars, this book contains an alphabetical list of constellations complete with star maps, historical background, and highlights of deep sky objects. [...] 

2013. XV, 221 p. 121 illus., 111 illus. in color. (The Patrick Moore Practical Astronomy Series) Softcover 

$37.99  
ISBN 978-1-4614-7647-4
J. D. Clark

Measure Solar System Objects and Their Movements for Yourself!

Instead of taking somebody’s word for it about the basic size and distance statistics for the solar system, this book shows amateur astronomers how to measure these things for themselves. This is an enriching experience for any amateur astronomer - to understand and personally measure some fundamental astronomical quantities and distances. [...] 

J. L. Hopkins

Using Commercial Amateur Astronomical Spectrographs

Amateur astronomers interested in learning more about astronomical spectroscopy now have the guide they need. It provides detailed information about how to get started inexpensively with low-resolution spectroscopy, and then how to move on to more advanced high-resolution spectroscopy. [...] 

G. I. Redfern

Cruise Ship Astronomy and Astrophotography

Enrich your next sea vacation with this fun how-to guide to observing and doing astrophotography on water. Collecting together the author’s five decades of astrophotography and teaching experience, this book shares all the practical information you will need to start on your own astronomy adventure. [...] 

G. Parker

Making Beautiful Deep-Sky Images

Astrophotography with Affordable Equipment and Software

In this updated version of his classic on deep-sky imaging, astrophotographer Greg Parker describes how the latest technology can help amateur astronomers process their own beautiful images. [...] 

J. Clark

Viewing and Imaging the Solar System

A Guide for Amateur Astronomers

Viewing and Imaging the Solar System: A Guide for Amateur Astronomers is for those who want to develop their ability to observe and image Solar System objects, including the planets and moons, the Sun, and comets and asteroids. They might be beginners, or they may have already owned and used an astronomical telescope for a year or more. [...] 

J. L. Chen

How to Find the Apollo Landing Sites

This book is for anyone who wants to be able to connect the history of lunar exploration to the Moon visible above. It addresses what Apollo equipment and experiments were left behind and what the Apollo landings sites look like now. Each Apollo mission is examined in detail, with photos that progressively zoom-in to guide the reader in locating the Apollo landing sites. [...] 

J. D. Clark

Measure Solar System Objects and Their Movements for Yourself!

Instead of taking somebody’s word for it about the basic size and distance statistics for the solar system, this book shows amateur astronomers how to measure these things for themselves. This is an enriching experience for any amateur astronomer - to understand and personally measure some fundamental astronomical quantities and distances. [...] 

Anyone interested in astronomy battles with the conveniences of modern living – street lights, advertising and security lighting, tall buildings, and even the occasional tree. More than 85% of the population now lives in crowded and light-polluted towns and cities.

**J. Ashley**

**Astrophotography on the Go**
Using Short Exposures with Light Mounts

No longer are heavy, sturdy, expensive mounts and tripods required to photograph deep space. With today’s advances in technology, all that is required is an entry-level DSLR and an entry level GoTo telescope. Here is all of the information needed to start photographing the night sky without buying expensive tracking mounts. [...] 2015. X, 320 p. 111 illus., 37 illus. in color. *Astrophysics Is Easy! An Introduction for the Amateur Astronomer*

Astrophysics is often – with some justification – regarded as incomprehensible without the use of higher mathematics. Consequently, many amateur astronomers miss out on some of the most fascinating aspects of the subject. Astrophysics Is Easy! cuts through the difficult mathematics and explains the basics of astrophysics in accessible terms. [...]

*1,001 Celestial Wonders to See Before You Die*  
The Best Sky Objects for Star Gazers

1,001 Celestial Wonders is a guide to the night sky’s brightest and most fascinating objects. Each target is accessible to amateur astronomers using medium-sized telescopes from a dark site. In fact, many are so bright they remain visible under moderate light pollution, as from the outskirts of a city or the suburbs of a town. [...]

$49.99
ISBN 978-1-4419-1776-8
Building an astronomical telescope offers the amateur astronomer an exciting challenge, with the possibility of ending up with a far bigger and better telescope than could have been afforded otherwise. In the past, the starting point has always been the grinding and polishing of at least the primary mirror, a difficult and immensely time-consuming process. [...]
R. Kier

The 100 Best Astrophotography Targets
A Monthly Guide for CCD Imaging with Amateur Telescopes

Any amateur astronomer who is interested in astrophotography, particularly if just getting started, needs to know what objects are best for imaging in each month of the year. These are not necessarily the same objects that are the most spectacular or intriguing visually. The camera reveals different things and has different requirements. [...]

Binocular Astronomy

Binoculars have, for many, long been regarded as an “entry level” observational tool, and relatively few have used them as a serious observing instrument. This is changing! Many people appreciate the relative comfort of two-eyed observing, but those who use binoculars come to realize that they offer more than comfort. [...]

Getting Started in Radio Astronomy
Beginner Projects for the Amateur

Radio astronomy is a mystery to the majority of amateur astronomers, yet it is the best subject to turn to when desirous of an expanded knowledge of the sky. This guide intends to instruct complete newcomers to radio astronomy, and provides help for the first steps on the road towards the study of this fascinating subject. [...]

T. J. Jensen

Budget Astrophotography
Imaging with Your DSLR or Webcam

Here are clear explanations of how to make superb astronomical deep-sky images using only a DSLR or webcam and an astronomical telescope – no expensive dedicated CCD cameras needed! The book is written for amateur astronomers interested in budget astrophotography – the deep sky, not just the Moon and planets – and for those who want to improve their imaging skills using DSLR and webcams. [...]

How to Photograph the Moon and Planets with Your Digital Camera

Although astronomical CCD cameras can be very costly, digital cameras – the kind you use on holiday – on the other hand, are relatively inexpensive. Moreover, their technology – especially thermal noise, sensitivity (ISO number) and resolution – has progressed to a point where such cameras are more than capable of photographing the brighter astronomical objects. [...]

Choosing and Using Astronomical Eyepieces

A valuable reference that fills a number of niches including that of a buyer’s guide, technical desk reference and observer’s field guide. It documents the past market and its evolution, right up to the present day. [...]  
2013. XVIII, 442 p. 268 illus., 51 illus. in color. (The Patrick Moore Practical Astronomy Series) Softcover
$49.99
ISBN 978-1-4614-7722-8
In the Victorian era – or for non-British readers, the mid-to-late nineteenth century – amateur astronomy tended to center on Solar System objects. The Moon and planets, as well as bright comets, were the key objects of interest. The brighter variable stars were monitored, but photography was in its infancy and digital imaging lay a century in the future. [...]
Asteroids and Dwarf Planets and How to Observe Them

Dwarf planets (which were formerly called asteroids except for the planet Pluto), and the smaller Solar System bodies still called asteroids today, are making front page news, particularly those that are newly discovered and those that might present a hazard to life on Earth by impacting our planet. [...]

How Will We Communicate with Intelligent Life on Other Worlds?

For a long time I have been giving scientific lectures in different countries and on diverse topics, generally related to astronomy and to my work at the Arecibo Observatory. No matter which particular topic I am talking about, the same question always comes up: Have we had any contact at Arecibo with "them"? My negative answer does not satisfy anyone. [...]
G. Verschuur

The Invisible Universe
The Story of Radio Astronomy
Hidden from human view, accessible only to sensitive receivers attached to huge radio telescopes, the invisible universe beyond our senses continues to fascinate and intrigue our imaginations. Closer to home, in the Milky Way galaxy, radio astronomers listen patiently to the ticking of pulsars that tell of star death and states of matter of awesome densities. ...

Surveying the Skies
How Astronomers Map the Universe
Since the time of Galileo, astronomy has been driven by technological innovation. With each major advance has come the opportunity and enthusiasm to survey the sky in a way that was not possible before. It is these surveys of discovery that are the subject of this book. ...

G. Bascom

On the Inside of a Marble
From Quantum Mechanics to the Big Bang
Keeping in mind that we can only see the universe from the comfort of our home galaxy, Bascom begins his text by meticulously laying the necessary groundwork to understand the Big Bang’s mathematics without using any equations. He then paints a freeze-frame picture of our universe as if we had taken a three-dimensional picture with a giant camera. ...

G. Börner

The Wondrous Universe
Creation without Creator?
The world as it is viewed from modern physics and cosmology has many strange and unexpected features. Often these are in stark contrast with our everyday experience or our preconceptions, such as the concept of space and time as finite and changeable. Nevertheless it is this strange world which is the fundamental basis of our existence. ...

G. Rhee

Cosmic Dawn
The Search for the First Stars and Galaxies
This book takes the reader on an exploration of the structure and evolution of our universe. The basis for our knowledge is the Big Bang theory of the expanding universe. This book then tells the story of our search for the first stars and galaxies using current and planned telescopes. ...

Visible and Invisible
The Wonders of Light Phenomena

Light phenomena have intrigued humankind since prehistory. Think of the rainbow, a sunset on the sea, a game of shadows. Humans have always used light for their own needs, from cooking food to illuminating a room. However, light is not only limited to what we can see with our eyes. The invisible part of the electromagnetic spectrum is broad and dynamic.

The purpose of the book is a dual one: to detail the nature and results of Tunguska investigations in the former USSR and present-day CIS, and to destroy two long-standing myths still held in the West. The first concerns alleged “final solutions” that have ostensibly been found in Russia or elsewhere. [...]

S. J. Dick
Classifying the Cosmos
How We Can Make Sense of the Celestial Landscape
Since the invention of the telescope 400 years ago, astronomers have rapidly discovered countless celestial objects. But how does one make sense of it all? Astronomer and former NASA Chief Historian Steven J. Dick brings order to this menagerie by defining 82 classes of astronomical objects, which he places in a beginner-friendly system known as “Astronomy’s Three Kingdoms.” [...]

Galaxy Collisions
Forging New Worlds from Cosmic Crashes

The spectacular images of galaxy collisions capture the imagination. This book will show what is out there in the universe, what it’s like in other galaxies, what they might look like, and how cosmic processes might affect life in other solar systems. It will explain crucial stages in the development of physical structure in the universe, and the effect of galaxy scale processes. [...] 2011. XV, 285 p. (Springer Praxis Books) Softcover

### Solar System Maps

**From Antiquity to the Space Age**

In recent years, there has been increased interest in our Solar System. This has been prompted by the launching of giant orbiting telescopes and space probes, the discovery of new planetary moons and heavenly bodies that orbit the Sun, and the demotion of Pluto as a planet. In one generation, our place in the heavens has been challenged, but this is not unusual. [...]
