The Institute of Information Engineering (IIE) is a national research institute in Beijing that specializes in comprehensive research on theories and applications related to information technology.

IIE strives to be a leading global academic institution by creating first-class research platforms and attracting top researchers. It also seeks to become an important national strategic power in the field of information technology.

IIE’s mission is to promote China’s innovation and industrial competitiveness by advancing information science, standards, and technology in ways that enhance economic security and public safety as well as improve our quality of life.

IIE was founded in 2011 as part of a strategic government initiative and has made a great start in its development. As of the end of 2017, IIE had a staff of 768, including more than 206 research professors or associate professors. IIE currently has six research departments and several laboratories, including the State Key Laboratory of Information Security, the National Engineering Laboratory of Information Security Technology, the National Engineering Research Center of Information Security, and the CAS Data Assurance and Communication Security Research Center.

In addition to academic research, IIE also makes great efforts to cultivate future generations of researchers and professionals in information technology. It offers several masters and doctoral programs in computer science and information security, and provides a stimulating research environment for graduate students, postdoctoral scholars and visiting researchers. As of the end of 2017, IIE had a total of 1159 graduate students, including 233 guest students from other institutions.

IIE is active in international collaboration. In 2017, the number of outbound and inbound academic exchange visits nearly 200. In addition, IIE also participates in other kinds of activities such as hosting international conferences. IIE has also hosted visiting professors under the CAS Visiting Professorship for Senior International Scientists Program since 2012. IIE aims to further strengthen its international exchange activities in order to expand the institute’s international influence.
