Mathematics

Dear reader,

Browse the Catalogs for Springer Nature’s most promising titles in 2019. You will find the international authorship and high quality contributions you have come to expect from the Springer Nature brand in every title.

Find more catalogs at springer.com/catalogs

If you are looking for something very specific, go to our online catalog at springer.com and search among the 302,062 books in print by keyword. The Advanced Search makes it easy to define any scientific subject you have. You can even download a catalog just like this one with your own personal selection – completely free of charge.

We hope you will enjoy browsing through our new titles and make your selection today!

With best wishes,

Ria Frauenfeld

**Lattice Path Combinatorics and Applications**

The most recent methods in various branches of lattice path and enumerative combinatorics along with relevant applications are nicely grouped together and represented in this research contributed volume. [...] 2019. XXV, 418 p. 128 illus., 44 illus. in color. (Developments in Mathematics, Volume 58) Hardcover € 99,99 | £ 89,99 € (D) 106,99 | € (A) 109,99 | CHF 118.00 ISBN 978-3-030-11101-4

N. Aydin, L. Hammoudi

**Al-Kāšī’s Miftāḥ al-Ḥisab, Volume I: Arithmetic**

Translation and Commentary

Jamshid al-Ḵāšī’s Miftāḥ al-Ḥisab (Key to Arithmetic) was largely unknown to researchers until the mid-20th century, and has not been translated to English until now. This book begins a multi-volume set that finally brings al-Ḵāšī’s groundbreaking textbook to English audiences in its entirety. [...] 2019. VII, 240 p. 112 illus. in color. Hardcover € 99,99 | £ 89,99 € (D) 106,99 | € (A) 109,99 | CHF 118.00 ISBN 978-3-030-14949-9

**Recent Trends in Algebraic Combinatorics**

This edited volume features a curated selection of research in algebraic combinatorics that explores the boundaries of current knowledge in the field. Focusing on topics experiencing broad interest and rapid growth, invited contributors offer survey articles on representation theory, symmetric functions, invariant theory, and the combinatorics of Young tableaux. [...] 2019. VII, 362 p. 133 illus., 33 illus. in color. É. Barbin, M. Menghini, K. Volkert (Eds.)

**Descriptive Geometry, The Spread of a Polytechnic Art**

The Legacy of Gaspard Monge

This book seeks to explore the history of descriptive geometry in relation to its circulation in the 19th century, which had been favoured by the transfers of the model of the École Polytechnique to other countries. The book also covers the diffusion of its teaching from higher instruction to technical and secondary teaching. [...] 2019. X, 404 p. 85 illus., 7 illus. in color. E. Giusti, J. I. Bernoulli, C. S. Roero, N. I. Bernoulli

**Die Werke von Johann I und Nicolaus II Bernoulli**

Band 2: Mathematik II

This volume contains 17 mathematical works by Johann Bernoulli, written between 1680 – when he was only 13 years old and studied mathematics with his brother Jacob – and 1732, when he was 65 years old. Five of the works are handwritten manuscripts, and another three belong to the Anekdota, which he published in the fourth volume of his Opera Omnia. [...] 2019. XVII, 573 p. 2 illus. Cryptology and Error Correction

An Algebraic Introduction and Real-World Applications

This text presents a careful introduction to methods of cryptology and error correction in wide use throughout the world and the concepts of abstract algebra and number theory that are essential for understanding these methods. [...]
This open access book provides an extensive treatment of Hardy inequalities and closely related topics from the point of view of Folland and Stein’s homogeneous (Lie) groups. The place where Hardy inequalities and homogeneous groups meet is a beautiful area of mathematics with links to many other subjects. [...] 

Due June 2019

S. Codogni, R. Dervan, F. Viviani (Eds.)

Moduli of K-stable Varieties

This volume is an outcome of the workshop “Moduli of K-stable Varieties”, which was held in Rome, Italy in 2017. The content focuses on the existence problem for canonical Kähler metrics and links to the algebro-geometric notion of K-stability. [...]

S. Kim, T. Koberda, M. Mj

Flexibility of Group Actions on the Circle

In this partly expository work, a framework is developed for building exotic circle actions of certain classical groups. The authors give general combination theorems for indiscrete isometry groups of hyperbolic space which apply to Fuchsian and limit groups. An abundance of integer-valued subadditive defect-one quasimorphisms on these groups follow as a corollary. [...]

Linear and Quasilinear Parabolic Problems
Volume II: Function Spaces
This volume discusses an in-depth theory of function spaces in an Euclidean setting, including several new features, not previously covered in the literature. In particular, it develops a unified theory of anisotropic Besov and Bessel potential spaces on Euclidean corners, with infinite-dimensional Banach spaces as targets. [...]

Temporal Type Theory
A Topos-Theoretic Approach to Systems and Behavior
This innovative monograph explores a new mathematical formalism in higher-order temporal logic for proving properties about the behavior of systems. Developed by the authors, the goal of this novel approach is to explain what occurs when multiple, distinct system components interact by using a category-theoretic description of behavior types based on sheaves. [...]

<td>Principles of Continuum Mechanics</td>
<td>This book addresses the basic concepts of continuum mechanics, that is, the classical field theory of deformable bodies. The theory is systematically developed, from the kinematics to the balance equations, the material theory, and the entropy principles. In turn, the linear-elastic solids, the ideal liquid and the Newtonian liquid are presented in detail as concrete applications. [...]</td>

**Non-Self-Adjoint Differential Operators, Spectral Asymptotics and Random Perturbations**

The asymptotic distribution of eigenvalues of self-adjoint differential operators in the high-energy limit, or the semi-classical limit, is a classical subject going back to H. Weyl of more than a century ago. In the last decades there has been a renewed interest in non-self-adjoint differential operators which have many subtle properties such as instability under small perturbations. [...]

An Introduction to Kolmogorov Complexity and Its Applications

This must-read textbook presents an essential introduction to Kolmogorov complexity (KC), a central theory and powerful tool in information science that deals with the quantity of information in individual objects. The text covers both the fundamental concepts and the most important practical applications, supported by a wealth of didactic features.

Supergeometry, Super Riemann Surfaces and the Superconformal Action Functional

This book treats the two-dimensional nonlinear supersymmetric sigma model or spinning string from the perspective of supergeometry. The objective is to understand its symmetries as geometric properties of super Riemann surfaces, which are particular complex super manifolds of dimension 1|1. The first part gives an introduction to the super differential geometry of families of super manifolds. [...]
